

CENTAURI64

THE MAGAZINE FOR CENTAURI64 USERS

ISSUE 1

WELCOME TO YOUR CENTAURI64!

GET STARTED WITH BASIC
AND WRITE YOUR FIRST PROGRAMS

PRINT
VARIABLES
INPUT

LOOPS
IF...THEN
GOSUB

SOUND
COLOUR
AND MORE!

The image shows a vintage Centauri64 computer system. A CRT monitor displays a BASIC program in blue text on a black background. The program includes a version number, a 'READY' prompt, a loop to print 'HELLO CENTAURI64!', and a 'RUN' command. Below the monitor is a keyboard with 'CENTAURI64' printed on the right side. To the left of the keyboard, several software boxes are stacked, with the top one labeled 'CENTAURI SOFTWARE'. In the foreground, a cassette tape labeled 'CENTAURI64 DUNGEON OF GHOULE' is visible. The background is dark with some blue and red light effects.

```
CENTAURI64 BASIC V1.0  
READY.  
10 PRINT "HELLO CENTAURI64!"  
20 GOTO 10  
  
RUN  
HELLO CENTAURI64!  
HELLO CENTAURI64!  
HELLO CENTAURI64!  
HELLO CENTAURI64!  
HELLO CENTAURI64!
```

COVER TAPE GAME

DUNGEON OF GHOULE

A TEXT ADVENTURE FOR EVERYONE

THE COMPUTER THAT STARTS WITH YOU.

The Centauri64 arrives ready to program. No software package to load. No mysterious setup. Switch on, type an instruction and the machine answers.

```
PRINT "HELLO"
```

That is the beginning. What comes next is up to you.

BUILT IN

Centauri BASIC · 32 colours · 64K memory · High Resolution and Arcade display modes.

THIS MONTH

Learn BASIC from the blinking cursor to a complete adventure — then alter the cover game yourself.

WHAT YOU GET

A real home computer that boots straight into BASIC. Type at the prompt and it answers. Number your lines and it remembers. SAVE to tape and LOAD tomorrow. The same Centauri BASIC printed in this magazine is the language in the machine — no special edition, no hidden commands.

FOR PEOPLE WHO MAKE THINGS

Games. Utilities. Experiments that crash and get fixed. The Centauri64 is for fingers on keys, not for watching other people's software forever.

£199

64K Centauri64
Welcome tape
Issue 1 magazine
1 game — Dungeon of Ghoule

CENTAURI COMPUTER SYSTEMS

The home computer for people who want to make things.

READY WHEN YOU ARE

Open the box. Plug in. Switch on. When you see READY, you have already started.

```
READY .  
PRINT "HELLO"  
HELLO
```

| FROM HELLO TO CASTLE GHOULE IN ONE ISSUE.

Welcome to the first issue. This month we begin at the BASIC prompt and finish inside Castle Ghoule. Every listing here has been written for the same Centauri BASIC that you use — no secret magazine version.

GETTING STARTED	MEET YOUR CENTAURI64 Immediate commands, numbered lines, LIST and RUN.	4
BASIC 1	YOUR FIRST PROGRAM GOTO, NEW, SAVE and LOAD.	5
BASIC 2	MEMORY, MATHS & INPUT Variables, whole-number arithmetic, strings and INPUT.	6
BASIC 3	MAKING DECISIONS IF...THEN and the first tiny adventure.	8
BASIC 4	GOTO & RANDOMNESS Build rooms, then let RND surprise the player.	10
BASIC 5	COLOUR & RESET INK, PAPER, CLS and getting back to normal.	11
TYPE-IN	GUESS MY NUMBER A complete game using everything learned so far.	12
COVER TAPE	DUNGEON OF GHOULE Play it, LIST it, understand it, hack it.	14
CHALLENGE	YOUR FIRST PROGRAM Send us your software. Payment: £2.	19
NEXT MONTH	GRAPHICS! High Resolution drawing and Lunar Rescue.	20

HOW TO USE THIS ISSUE	LISTINGS	COVER TAPE
Read from the front if you are new. Jump to page 12 if you want a game tonight. Jump to page 14 if the cover tape is calling.	Type them carefully. LIST often. If something fails, the bug is usually a missing quote or a wrong line number — hunt it down.	LOAD DUNGEON from My Software once Issue 1 has granted the tape. Then LIST it. The magazine explains what you will see.

MEET YOUR CENTAURI64

The blinking cursor is the machine asking what you want to do.

Switch on and BASIC is ready. Simple programs run on the normal screen, directly beneath the editor. You only leave it when a program deliberately changes display mode.

At the prompt, type **PRINT "HELLO"**. With no line number the instruction happens immediately. HELLO appears, but the instruction is not stored.

Now add a line number: **10 PRINT "HELLO"**. This time nothing is printed. The Centauri64 has remembered the line as part of a program.

WHY THE DELAY?
Numbered lines are building materials. Immediate lines are tools. You need both.

Type **LIST** to see the stored program. Type **RUN** to execute it. BASIC begins at the lowest numbered line and works down.

Programmers commonly number lines 10, 20, 30 rather than 1, 2, 3. The gaps leave room to insert extra instructions later.

IMMEDIATE

```
PRINT "HELLO"
HELLO
```

STORED

```
10 PRINT "HELLO"
LIST
10 PRINT "HELLO"
```

RUN IT

```
RUN
HELLO
```

ALSO TRY

```
PRINT 2+2
4
A=10
PRINT A
10
```

TRY IT

PRINT 2+2 works immediately too. Experiment at the prompt; numbered lines are for the program you are building.

SURVIVAL GUIDE

If a running program will not stop by itself, use the normal Centauri64 break control to return to BASIC.

CHECKLIST

- Can you PRINT a word immediately?
- Can you store a numbered line?
- Does LIST show it?
- Does RUN print it?

COMMON MISTAKE

Forgetting the quotes around text: PRINT HELLO looks for a variable named HELLO. PRINT "HELLO" prints the word.

WHEN READY. RETURNS, YOU ARE BACK IN CHARGE.

IMMEDIATE VS STORED

Immediate statements answer now and vanish. Numbered lines wait for RUN. Use the prompt to experiment; use numbers when you want a program you can LIST.

LINE NUMBERS

10, 20, 30 leave room for 15. If you number 1, 2, 3 you will run out of gaps the first time you need an extra PRINT.

NEXT PAGE

Two lines make a loop with GOTO. Then NEW, SAVE and LOAD turn experiments into tapes you can keep.

YOUR FIRST PROGRAM

Two lines make a loop. Four commands make programming practical.

```
10 PRINT "MY CENTAURI64 RULES!"
20 GOTO 10
```

RUN it. Line 10 prints the message. Line 20 sends execution back to line 10. The message repeats until you stop the program.

CHANGE IT

```
10 PRINT "GHOULE IS COMING!"
15 PRINT "RUN AWAY!"
20 GOTO 10
```

Typing an existing line number replaces it. A new line number is inserted in the right place.

LINE 15 sits between 10 and 20 because you left gaps. That is why magazines number by tens.

DELETE A LINE

Type the line number alone and press RETURN. The line vanishes from the program. LIST to confirm.

NEW	clears the current program. Save first if you want to keep it.
LIST	shows the numbered program currently in memory.
SAVE	stores your current program on a Centauri64 tape.
LOAD	brings a saved tape back so you can RUN or LIST it.

GOOD HABIT
Save a copy before making wild changes. Wild changes are encouraged.

DEBUGGING TIP
If the loop never stops printing, that is success — until you break out. If nothing prints, LIST and check the quotes.

A LOOP IS THE FIRST TIME THE COMPUTER FEELS ALIVE.

THINGS TO TRY

- Change the message on line 10.
- Add line 15 with a second PRINT.
- SAVE the program. NEW. LOAD it back.

GIVE IT A MEMORY

Variables are simply names attached to values.

STORE A NUMBER

```
10 GOLD=10
20 PRINT GOLD
```

CHANGE IT

```
10 GOLD=10
20 GOLD=GOLD+5
30 PRINT GOLD
```

WHOLE NUMBERS

```
10 A=10/3
20 PRINT A
3
```

Think of GOLD as a labelled place in memory. GOLD=10 puts the value 10 there. GOLD=GOLD+5 takes the old value, adds five, then stores the answer.

Centauri BASIC works with whole numbers. Ten divided by three gives 3, not 3.333. For scores, lives, counters and game logic that is often exactly what you want.

Multiplication and division happen before addition and subtraction. Brackets let you change the order: 2+3*4 gives 14, while (2+3)*4 gives 20.

GAME THINKING

A number can remember an event as well as a quantity. Dungeon of Ghoule will use 0 for 'no key' and 1 for 'key found'.

WHY WHOLE NUMBERS?

Scores stay tidy. IF comparisons stay exact. You are writing games, not spreadsheets.

Try printing GOLD before you set it. Then set it. Then change it. Watch the labelled place update.

TALK TO YOUR COMPUTER

INPUT turns a program from a speech into a conversation.

```
10 PRINT "WHAT IS YOUR NAME?"
20 INPUT "NAME";N$
30 PRINT "HELLO "+N$
```

A normal variable holds a number. A variable ending in \$ holds text. N\$ remembers whatever the player types. The + on line 30 joins two pieces of text.

BEGIN AN ADVENTURE

```
10 CLS
20 PRINT "WELCOME TO CASTLE GHOULE!"
30 INPUT "WHAT IS YOUR NAME";N$
40 PRINT "WELCOME, "+N$
50 PRINT "THE DOOR CREAKS OPEN..."
```

The player's own answer has become part of the story. Next we need to let an answer change what happens.

TRY IT

Change N\$ to HERO\$. Ask another question and store its answer in a second \$ variable.

REMEMBER

CLS clears the normal BASIC screen. Text programs do not need a separate display mode.

NEXT: INPUT GIVES US A CHOICE. IF...THEN WILL LET THE COMPUTER DECIDE WHAT THAT CHOICE MEANS.

MAKING DECISIONS

IF...THEN is the fork in the road.

```
10 INPUT "HOW MUCH GOLD";GOLD
20 IF GOLD>10 THEN GOTO 100
30 PRINT "YOU CANNOT AFFORD IT!"
40 END
100 PRINT "SOLD!"
```

IF checks a condition. If it is true, THEN tells BASIC what to do. Here, having more than 10 gold sends execution to line 100.

USEFUL COMPARISONS

=	equal
<	less than
>	greater than
<=	less or equal
>=	greater or equal
<>	not equal

A TWO-CHOICE GAME

```
10 CLS
20 PRINT "YOU STAND BEFORE A DARK DOOR."
40 PRINT "1 OPEN THE DOOR"
50 PRINT "2 RUN AWAY"
60 INPUT "CHOICE";A
70 IF A=1 THEN GOTO 100
80 IF A=2 THEN GOTO 200
90 GOTO 40
100 PRINT "THE DOOR CREAKS OPEN..."
110 END
200 PRINT "YOU RUN HOME!"
210 END
```

The player chooses. INPUT remembers the choice. IF decides where the program goes. That is already enough to make a game.

Dungeon of Ghoule uses the same trick. Its castle is bigger, but the machinery underneath is no more mysterious.

BUILD A TINY ADVENTURE

Use groups of line numbers like rooms on a map.

BASIC normally runs down through the numbered lines. GOTO changes the route. Keeping locations in separate ranges makes a longer listing easier to understand.

ADD A ROOM!

Add option 3 to the Hall and send it to line 400. Dungeon? Treasure room? Dragon's lair? You decide.

WHY THE GAPS?

Using 200, 300, 400 leaves space for extra lines inside each room later.

HALL → KITCHEN → CELLAR. SAME PATTERN AS CASTLE GHOULE.

```
10 CLS
20 PRINT "YOU ARE IN A DARK HALL."
40 PRINT "1 GO TO THE KITCHEN"
50 PRINT "2 GO TO THE CELLAR"
60 INPUT "CHOICE";A
70 IF A=1 THEN GOTO 200
80 IF A=2 THEN GOTO 300
90 GOTO 40
200 CLS
210 PRINT "THE KITCHEN"
230 PRINT "A CAKE SITS ON THE TABLE."
250 PRINT "1 RETURN TO THE HALL"
260 INPUT "CHOICE";A
270 IF A=1 THEN GOTO 10
300 CLS
310 PRINT "THE CELLAR"
330 PRINT "IT IS COLD AND DARK."
350 PRINT "1 RETURN TO THE HALL"
360 INPUT "CHOICE";A
370 IF A=1 THEN GOTO 10
```

LEAVE IT TO CHANCE

RND lets the Centauri64 surprise the player.

WHAT DOES RND DO?

```
10 PRINT RND(2)
20 GOTO 10
```

0 OR 1

RND(2) produces 0 or 1. RND(10) produces a whole number from 0 to 9.

AN EVENT

```
20 R=RND(2)
30 IF R=0 THEN GOTO 100
40 GOTO 200
100 PRINT "YOU FOUND A GOLD COIN!"
110 END
200 PRINT "A BAT FLIES PAST!"
210 END
```

Run the program several times. The same listing can produce different events because the computer makes one of the choices.

FROM THE CRYPT

```
696 R=RND(2)
697 PRINT ""
698 IF R=0 THEN GOTO 1200
699 GOTO 1210
```

Those four lines come straight from *Dungeon of Ghoule*.

THINGS TO TRY

Change RND(2) to RND(3). Add a third outcome. Surprise yourself.

COLOUR YOUR CENTAURI

INK chooses the writing. PAPER chooses the page.

```
10 PAPER 0
20 INK 15
30 CLS
40 PRINT "WELCOME TO MY PROGRAM!"
```

Set PAPER before CLS if you want the display cleared to the new background colour. INK changes the colour used by text that follows.

32 COLOURS

0	1	2	3	4	5	6	7
8	9	10	11	12	13	14	15
16	17	18	19	20	21	22	23
24	25	26	27	28	29	30	31

HELP! WHAT HAVE I DONE?

Experimenting with colours is half the fun. If the BASIC screen ends up in settings you no longer want, type **RESET** at the prompt.

NEW IS DIFFERENT

NEW clears the program in memory. RESET restores machine settings. They solve two different problems.

Paper 0 and Ink 15 give a classic dark screen with light text — the mood used by *Dungeon of Ghoule*.

ORDER MATTERS

PAPER then INK then CLS. If you CLS first, you clear to the old paper colour and wonder why nothing changed.

TRY A TITLE SCREEN

```
10 PAPER 16
20 INK 7
30 CLS
40 PRINT "CASTLE GHOULE"
```

READY FOR A GAME

You now have words, memory, choices, chance and colour. Page 12 puts them all in one type-in.

GUESS MY NUMBER

Your first complete type-in game — using nothing you haven't already learned.

Type the listing carefully, then RUN it. The Centauri64 chooses a secret number from 0 to 9 and gives you higher/lower clues until you find it.

WHAT'S HAPPENING?

- 10–30**
Mood: dark paper, light ink, clear screen.
- 40**
SECRET=RND(10) picks 0...9.
- 100**
INPUT waits for your guess in A.
- 110–120**
Compare. Equal? Win. Lower? Jump to “too low”.
- 140 / 170**
Back to the INPUT — the guessing loop.
- 210**
INK 7 makes the win message stand out.

TYPE IT — DON'T PASTE IT

The point of a type-in is that your fingers and brain meet every line. If you make an error, LIST the program and hunt it down.

IF IT MISBEHAVES

Wrong comparisons often mean a typing error on line 110 or 120. LIST those lines alone and re-enter them.

```
10 PAPER 0
20 INK 15
30 CLS
40 SECRET=RND(10)
50 PRINT "GUESS MY NUMBER!"
60 PRINT ""
70 PRINT "I AM THINKING OF A NUMBER"
80 PRINT "FROM 0 TO 9."
90 PRINT ""
100 INPUT "YOUR GUESS";A
110 IF A=SECRET THEN GOTO 200
120 IF A<SECRET THEN GOTO 160
130 PRINT "TOO HIGH!"
140 GOTO 100
160 PRINT "TOO LOW!"
170 GOTO 100
200 PRINT ""
210 INK 7
220 PRINT "YOU GOT IT!"
230 END
```

EVERY COMMAND ON THIS PAGE APPEARED EARLIER IN THE ISSUE.

SAMPLE RUN

YOUR GUESS? 3
TOO LOW!
YOUR GUESS? 8
TOO HIGH!
YOUR GUESS? 5
YOU GOT IT!

CHECKSUM HABIT

After typing, LIST. Count the lines. You should see 10 through 230 with no gaps where you meant to type. Missing 160 is a classic way to break the “too low” branch.

THEN OWN IT

Page 13 is not optional homework. Change the range, the messages, the colours. The type-in becomes your game the moment you stop copying.

NOW MAKE IT YOURS

The best type-in is the one you stop copying.

MAKE IT HARDER

```
40 SECRET=RND(100)
80 PRINT "FROM 0 TO 99."
```

Two changes make the game much tougher.

MAKE IT MEANER

Remove the TOO HIGH and TOO LOW clues. Now the player only learns whether the guess is correct.

ADD LIVES

```
35 LIVES=5
105 LIVES=LIVES-1
106 IF LIVES=0 THEN GOTO 300
```

Then print a GAME OVER message at line 300. You invent the exact wording.

ADD A SCORE

Can you count how many guesses the player makes? Start with GUESSES=0 near the top. Add one after each INPUT. PRINT the total when they win.

```
35 GUESSES=0
102 GUESSES=GUESSES+1
225 PRINT "GUESSES: ";GUESSES
```

A type-in is not a museum piece. Change the title. Change the range. Change the colours. Add messages. Break it, LIST it, repair it.

CHALLENGE

Can you make the computer choose from 1 to 10 instead of 0 to 9? Think about what RND(10) actually returns.

SAVE IT

Give your version a new tape name. You have made a real Centauri64 game.

**YOU ARE NO LONGER
FOLLOWING A LISTING. YOU
ARE WRITING SOFTWARE.**

THEN OPEN THE CASTLE

Page 14 begins Dungeon of Ghoule — the same tools, a much larger story.

DARE YOU ENTER CASTLE GHOULE?

Dungeon of Ghoule

High above the village stands Castle Ghoule. Nobody has entered its gates in years — or at least, nobody who has returned.

Tonight the gates are open. Explore the ruined castle, search its forgotten rooms and discover the secret guarded by the ghost in the tower. Choose carefully. Not everything buried beneath Castle Ghoule wants to be found.

How to play: type the number beside your choice and press RETURN. Your decisions decide where the story goes.

The most important thing about this month's cover game is not the treasure. It is that you can LOAD it, LIST it and see every instruction that makes the adventure work.

OPENING EXCERPT

```
30 PAPER 0
40 INK 15
50 CLS
60 KEY=0
70 PRINT "DUNGEON OF GHOULE"
150 PRINT "1 ENTER THE CASTLE"
160 PRINT "2 RUN AWAY"
170 INPUT "CHOICE";A
```

Mood first. Memory second. Choices third. That is the opening of almost every text adventure worth typing.

ON THIS MONTH'S COVER TAPE

Dungeon of Ghoule

LOAD IT · RUN IT · LIST IT · CHANGE IT

BEFORE YOU HACK

SAVE your own copy first. Then the castle is yours.

YOU ALREADY KNOW HOW THIS GAME WORKS.

WHAT YOU WILL RECOGNISE

- PRINT for rooms and choices
- INPUT for decisions
- IF...THEN / GOTO for routes
- KEY for memory
- RND in the Crypt
- INK / PAPER / CLS for atmosphere

OVER THE NEXT PAGES

We open the listing. Not every line — the parts that teach. Then we dare you to change them.

HOW DOES IT WORK?

There is no secret adventure command. You already know the machinery.

```
150 PRINT "1 ENTER THE CASTLE"
160 PRINT "2 RUN AWAY"
170 INPUT "CHOICE";A
180 IF A=1 THEN GOTO 200
190 IF A=2 THEN GOTO 900
```

Dungeon of Ghoule prints choices, waits for a number, then uses IF and GOTO to decide where execution continues.

THE CASTLE IN LINE NUMBERS

200	Great Hall
400	Tower
500	Cellar
600	Crypt
700	Ghost
1000	Treasure Room

Keeping locations in separate groups of line numbers makes a long listing easier to understand. It also leaves room to insert new instructions.

Notice how the Great Hall acts as a hub. Several choices send the player out to other locations; those locations can send the player back.

Once you see the listing as a collection of small sections rather than one enormous program, the adventure becomes much less intimidating.

THE GREAT HALL

Stairs, cellar, crypt, leave — four doors from one room. That hub pattern is half of adventure design.

THE SILVER KEY

One variable gives the adventure a memory.

AT THE START

```
60 KEY=0
```

IN THE CELLAR

```
570 KEY=1
575 PRINT "YOU FOUND A SILVER KEY!"
```

AT THE GHOST

```
730 IF KEY=1 THEN GOTO 800
```

That's the whole trick. KEY=0 means the player has not found the key. KEY=1 means they have. When the player meets the ghost, the program checks the value.

A variable does not need to represent a visible number. It can remember whether something happened earlier. That gives the game a history.

The same idea can represent a door switch, a rescued prisoner, a treasure already collected, a boss defeated or a conversation already heard.

THE LESSON

You do not need a special inventory command to begin making adventures. A handful of well-chosen variables can remember a surprising amount about the player's journey.

KEY IS NOT A SCORE. KEY IS A STORY.

TRACE IT

LOAD DUNGEON. LIST. Find lines 60, 570 and 730. Watch the same idea in three places.

EXPECT THE
UNEXPECTED

The Crypt does not behave the same way every time.

```
696 R=RND(2)
697 PRINT ""
698 IF R=0 THEN GOTO 1200
699 GOTO 1210
```

One result sends bats bursting from the walls. The other gives the player a whispered clue about the silver key.

DUNGEON OF GHOULE IS REALLY JUST...

PRINT	describe the world
INPUT	ask what the player wants
IF	make decisions
GOTO	move around the adventure
VARIABLES	remember what happened
RND	add surprise
INK/PAPER/CLS	set the mood

NO SECRET ENGINE

The cover game is made from the same BASIC you've been learning. LOAD it, LIST it, read it and change it.

YOU ALREADY KNOW

PRINT · INPUT · variables · strings · IF · GOTO · RND · INK · PAPER · CLS

Put together, they feel much larger than any one command.

A CASTLE IS ONLY ROOMS, CHOICES AND
MEMORY.

HACK THE DUNGEON!

Don't just play the cover tape. Make it yours.

- 1

EASY — Rewrite the ghost
Change the ghost's dialogue. Make it frightening, friendly or ridiculous.
- 2

EASY — Change the treasure
Gold is predictable. What else could be hidden in the secret room?
- 3

MEDIUM — Change the Crypt
Replace the bats or whispered clue with your own random event.

WHERE TO LOOK

700+	Ghost dialogue and key check
1000+	Treasure room text
696–699	Crypt randomness
280–360	Great Hall choices

- METHOD

LIST a section. Change one PRINT. RUN. If it breaks, re-enter the line.

- 4

MEDIUM — Add another choice
Give one existing room a third option and send it somewhere new.
- 5

HARD — Build a new room
Create a new location around line 1300 and connect it to Castle Ghoule.

SAVE YOUR VERSION
Give your altered game a new name and save it to your own tape. Keep the original cover tape untouched so you can always start again.

STARTER EDIT
Find the Great Hall title PRINT and change it to THE HAUNTED HALL. Instant ownership.

NEW ROOM PATTERN
1300 CLS
1310 PRINT "THE SECRET LIBRARY"
1320 PRINT "1 RETURN TO THE HALL"
1330 INPUT "CHOICE";A
1340 IF A=1 THEN GOTO 200

Then add a Hall option that GOTOs 1300.

KEEP THE ORIGINAL

LOAD the cover tape, SAVE under a new name immediately, then hack the copy. If you ruin the castle, the original tape is still there.

ONE CHANGE AT A TIME

Change one PRINT. RUN. Change one IF. RUN. Magazines that invite you to rewrite half the listing at once are how type-ins die.

SHOW SOMEONE

When your version feels yours, SAVE it and try the Reader Challenge on page 19 — even a tiny HELLO loop qualifies.

YOUR FIRST PROGRAM

WE WANT YOUR SOFTWARE!

Have you written something for your Centauri64? Send it in. It does not need graphics. It does not need sound. It does not even need to be a game. We are looking for something that proves you have started programming your new computer.

Save it to a tape, give it a description and author, then submit it through the Reader Challenge. Even a tiny looping HELLO program can qualify. This is your first step, not your final exam.

TO ENTER

1. Write a Centauri BASIC program.
2. Save it to a tape.
3. Add description and author.
4. Submit it to the challenge.

IDEAS IF YOU ARE STUCK

- A looping HELLO with your name in it
- A two-room adventure using IF and GOTO
- A coloured title screen with PAPER / INK / CLS
- Your own version of Guess My Number

REMEMBER

NEW wipes the program. SAVE before you tidy up.

PAYMENT

£2

```
10 PRINT "HELLO"  
20 GOTO 10
```

YES, SIMPLE COUNTS

The point is to get started, finish something and send it. There will be harder challenges later.

WHAT WE LOOK FOR

That it RUNs. That you wrote it. That you cared enough to SAVE and submit. Style can wait.

**FINISH SOMETHING. SEND IT. GET PAID
£2.**

GRAPHICS!

You've made it talk. Now make it draw.

Issue 2 opens the Centauri64's High Resolution display. Plot points. Draw lines. Build rectangles and circles. Add colour. Then combine those ideas into your first graphical game.

YOU'LL LEARN

MODE 1 · PLOT · LINE · RECT · CIRCLE · movement · timing · simple graphical game loops

```
10 MODE 1
20 PLOT 160,120
30 LINE 20,20,300,200
```

WHY WAIT?

Because Issue 1 had to teach the language first. A line on screen is only interesting once you can PRINT, decide, remember and loop. Those habits survive when the pixels arrive.

UNTIL THEN
Finish Guess My Number. LIST Dungeon of Ghoule. Send your Reader Challenge program. February will still be waiting.

ON THE COVER TAPE

ON SALE NEXT MONTH
Keep Issue 1 beside the computer. Everything you learned here still matters when the pixels start flying.

ISSUE 1 → ISSUE 2	
Words	Pixels
INPUT	KEYS / timing
IF / GOTO	Game loops
RND	Hazard & luck

| YOU'VE MADE IT TALK. NOW MAKE IT DRAW.
